- **Study with discipline:** I will organize a study routine, dedicating at least 2 hours a day to learning programming languages like Python and Java, as well as studying math and logic.
- **Take online courses:** I plan to use free and paid platforms to take specific courses in programming, software development, and information security.
- **Join groups and projects:** I want to join study groups, participate in technology fairs, and work on practical projects to apply what I learn in theory.
- **Improve my English:** I know English is essential in the IT field, so I will practice every day with videos, music, and conversations to improve my fluency.
- **Prepare for college entrance exams:** I will focus on high school subjects that appear on entrance exams, like math, English, and language arts, to make sure I get accepted into the college of my dreams.
- **Get my driver's license:** I plan to study the traffic rules and practice driving regularly so I can get my driver's license next year, which will give me more independence and flexibility.
